

Werner Bosmans, a Belgian national, first graduated as a Bio-engineer at the University of Ghent, Belgium, and then did a Ph.D. in international economics in Montpellier, France. After undertaken research at the University of Ghent and at the Belgium Ministry of Agriculture, he was given further responsibilities at the Ministry, being involved in the "dioxin crisis". He became assistant to the Secretary-General of the Belgian and then Flemish Ministry of Agriculture. During that time he did a degree in Public Management and became part-time professor at the ULB (Université Libre de Bruxelles). In 2005, he joined the Directorate-General Environment of the European Commission, where he is now responsible for the implementation of the Thematic Strategy on the Sustainable Use of Natural Resources, promoting life-cycle thinking to reduce environmental impacts.
